# Crime and Justice Policy Lab

The Mission of the Crime and Justice Policy Lab (CJP) is to help governments and communities by using research to support innovation of new policy solutions.

Some examples of our work:

- United States:
  - Illegal firearms trafficking
  - Focused deterrence
  - Partnerships with District Attorney's Offices
- International Projects:
  - Collaborative Action Research Model: work in ten Caribbean countries
  - Civic Justice Model in Mexico

# The Importance of Data

Data is essential to effective programs and policies

- Characterize the problem
  - Identify *who* is at risk of committing and/or experiencing violence
  - Identify *where* and *when* violence is most likely to occur
  - Identify *trends* in violence over time
- Create interventions and policies based on this data
- Evaluate the effectiveness and impact of policies and programs

# Data Challenges: Availability and Quality

- In both the United States and in international contexts, we have seen:
  - Incomplete or inconsistent data collection
  - Data that is not available in digital form
  - Separate datasets that do not interface well
  - Inconsistent or unclear definitions
- Efforts to standardize and coordinate data efforts are vital to improving research, programming, and policy

# Data Challenges: Data Without Strategy

Even when more data are available, this doesn't necessarily translate into better research or policy

- Unnecessary data collection
  - Waste of time and resources
  - Unnecessary privacy risks
- Key questions are overlooked, and important data is not collected
- Data used may be a poor match for research questions
- Unclear *why* an intervention succeeds or fails, or even *how* it was conducted in practice

# Why Strategy is Important

## A domestic violence hotline is set up in Kenya

*Reuters: Hotline, 'gender champions', tackle violence against girls in drought-hit Kenya*

“Our understanding is that the hotline has been well received and **police records** have shown a steady increase in the number of **convicted rape cases** since it was launched in 2015, from zero in 2014 to 31 in 2017, **which have been attributed to the hotline.**”

Source: Devex, “What Went Wrong?: Perspectives on Failed Aid.”

A community member texts journalists

The [24-hour hotline] has a problem

## A deeper investigation of the hotline:

- Out of order for months at a time
- Most local people had never heard of it
- The number was hard to remember
- Reports not shared with police or sent to the wrong agency
- Insufficient funds to sustain it
- A dedicated local paralegal was likely behind many of the successful convictions
- The police already had a gender-based violence hotline

# Incorporating Strategy

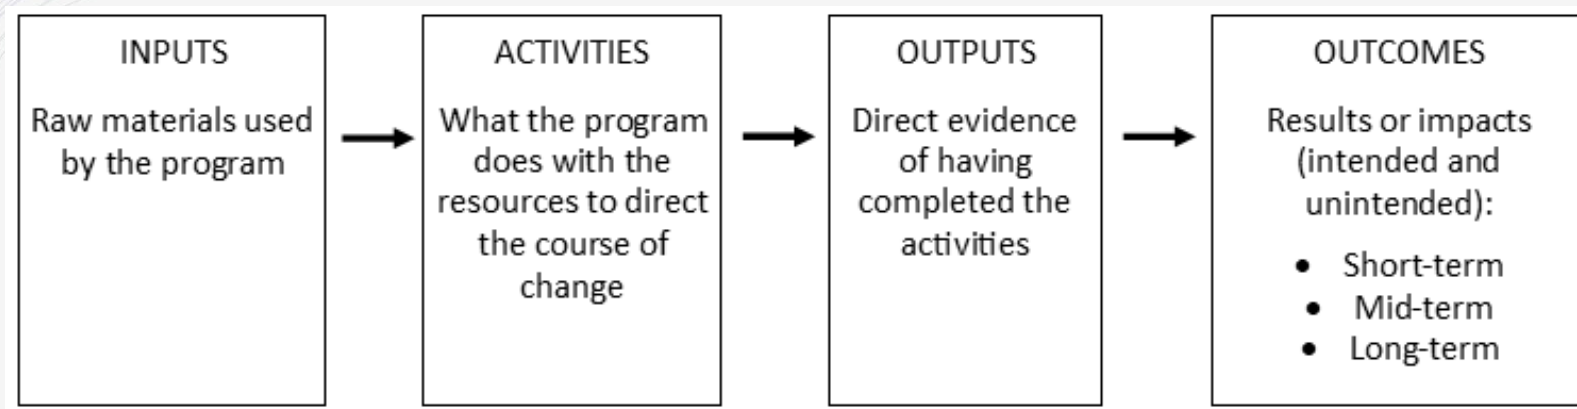

There are many strategic tools that can be used for program or policy **planning, implementation, monitoring, and evaluation**

- Problem analysis
- Needs assessments
- Asset mapping
- Stakeholder mapping
- Theories of Change (TOC) and Logic Models (LM)

# Theory of Change (TOC) and Logic Model (LM)

Tools that provide a visual depiction of how your program should work

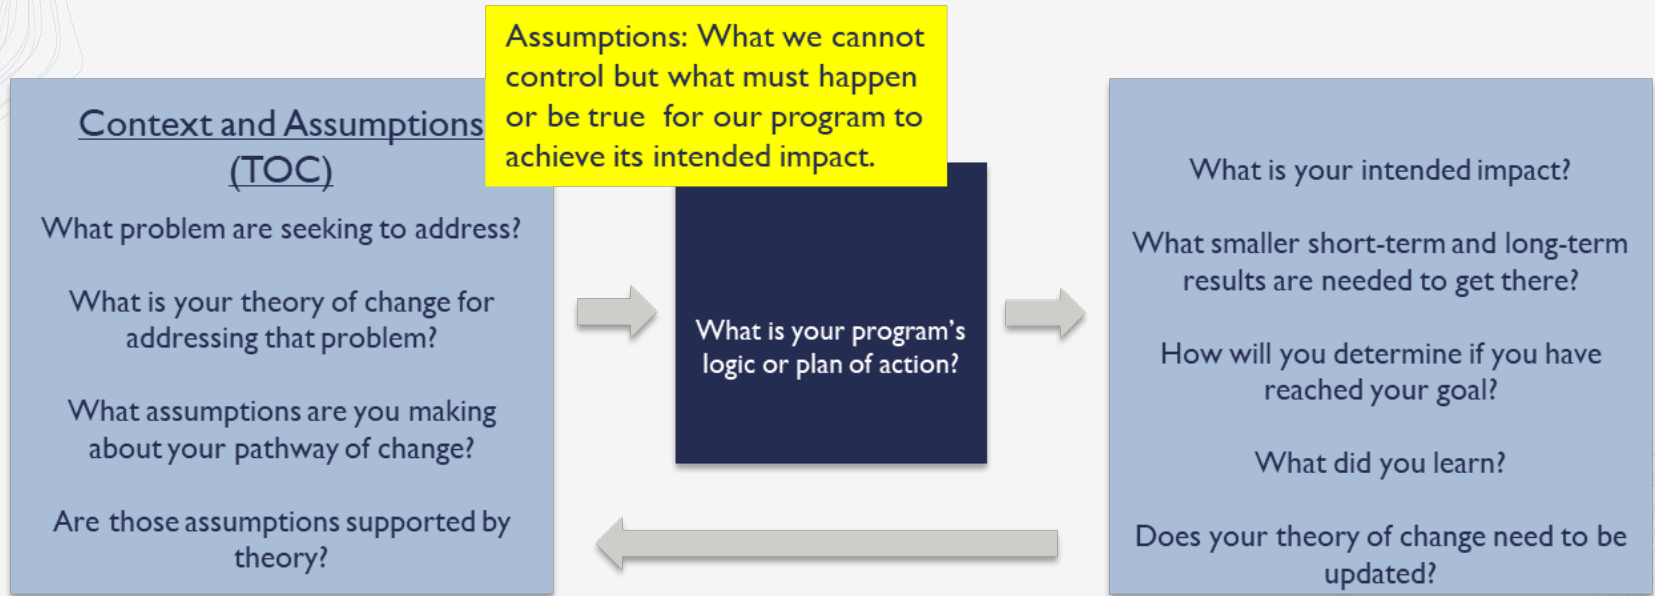

# Theory of Change (TOC) and Logic Model (LM)

- Theory of Change usually starts with your goal before deciding what programmatic approaches are appropriate
- TOCs define your pathway of change and explain *how* and *why* the desired change is expected to come about
- TOC include assumptions and evidence (when available)
- LMs usually start with a program and illustrate its key components

# Theory of Change: Context and Assumptions

# Theories of Change and Evaluation

## SUCCESSFUL INTERVENTION

## IMPLEMENTATION FAILURE

Process  
Evaluation

## THEORY FAILURE

Outcome/  
Impact  
Evaluation

SOURCE: THEORY OF CHANGE, KRISHNAN

# Why Are These Tools Important?

Many uses:

- Avoid common pitfalls in planning
- Set priorities and allocate resources
- Improve staff and stakeholder engagement (“shared vision”)
- Identify indicators
- Monitor progress
- Enhance accountability

*More about Theory of Change, Logic Models, and other strategic tools:*

# Goal: Reduce Gun Violence in Philadelphia

- Fatal shootings have nearly doubled since 2016
- Heavily concentrated in communities of color
- Philadelphians cite “crime, drugs, and public safety” as their top concern
- Only 44% of residents say they feel safe at night

# Place-Based Interventions

Previous research has shown that addressing signs of disorder (such as litter, graffiti, poorly maintained physical spaces) can reduce violence

Philadelphia study: 541 lots randomized to treatment (cleanup) or control

Areas near treated lots saw:

- 13% reduction in overall crime
- **29% reduction in gun violence**
- 21% reduction in burglaries
- Significant increases in resident reported feelings of safety
- Increased use of outdoor social spaces

*Before*

*After*

# Proposed New Study

## Research Questions:

- Does **basic street cleaning** (such as trash removal, weed trimming, leaf blowing, and sidewalk sweeping) impact rates of gun violence?
- What is the ideal frequency/dosage of street cleaning for violence reduction?
- Is street cleaning cost effective for violence reduction?

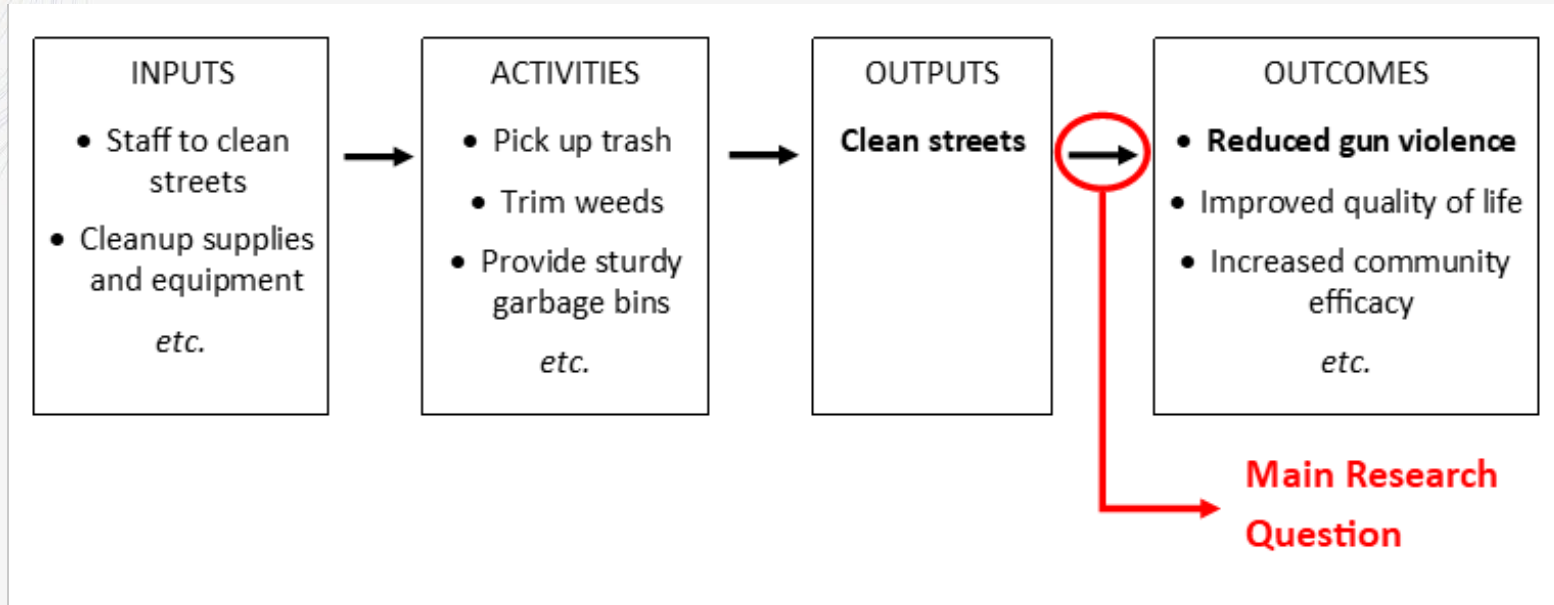

## Study Type:

- Mixed-Methods with a Randomized Controlled Trial

## Goals:

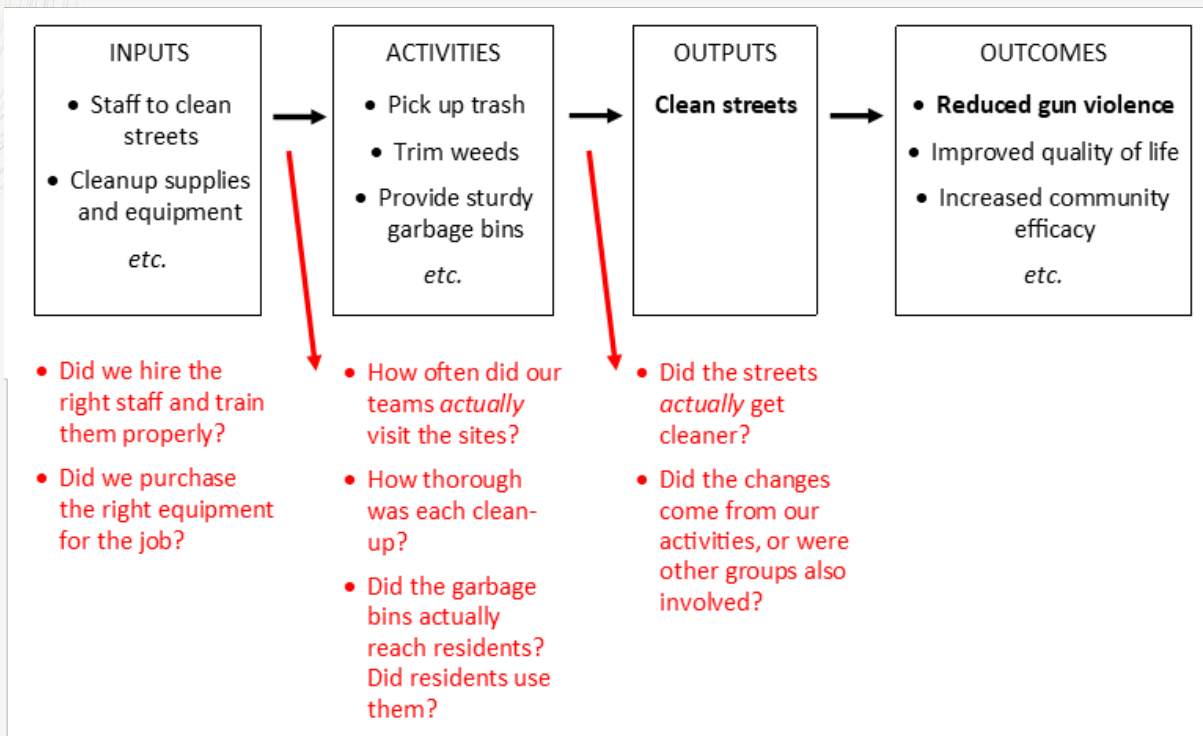

- Contribute to body of evidence on place-based interventions
- Provide *policymakers* with information about whether and how to adopt this strategy to reduce gun violence
- Provide *implementers* with detailed information on how to do this intervention effectively

# Planned Intervention: Logic Model

# Assumptions

# Finding the Necessary Data

For every research question, we asked ourselves:

1. What data already exist?
2. Will the existing data meet our needs?
3. What data do we need to collect ourselves?

# Examples of Data Collection

Research Question	Existing Sources of Data	Will it meet our needs?
<p>Did we hire the right staff and train them properly?</p> <p>Did we purchase the right equipment for the job?</p> <p>How often did our teams actually visit the sites?</p> <p>How thorough was each cleanup?</p>	<p>Internal documentation:</p> <ul style="list-style-type: none"><li>• Hiring and training processes</li><li>• Receipts of purchased items</li><li>• Cleanup schedules</li></ul>	<p>No- does not tell us:</p> <ul style="list-style-type: none"><li>• What happened in <i>practice</i></li><li>• How the intervention felt from the perspective of staff</li></ul> <p style="text-align: center;"></p>

**Data to Collect:  
Interviews with staff**

# Examples of Data Collection

Research Question	Existing Sources of Data	Will it meet our needs?
Did the streets actually get cleaner?	<ul style="list-style-type: none"><li>• Google Street View images</li><li>• Opinion surveys</li><li>• 2018 City of Philadelphia litter index</li></ul>	<p>No, they all have shortcomings:</p> <ul style="list-style-type: none"><li>• Not taken often enough</li><li>• Not geographically specific enough, and risk subjectivity</li><li>• Validated, but out of date</li></ul> <p style="text-align: center;">↓</p>

**Data to Collect:  
Observational Site Visits**

# Examples of Data Collection

Research Question	Existing Sources of Data	Will it meet our needs?
Did the changes come from our activities, or were other groups also involved?	<ul style="list-style-type: none"><li>• City of Philadelphia websites</li><li>• Information from our partners on other places they are doing work</li><li>• Social media</li></ul>	Partly: these will likely capture most <i>official</i> efforts but will miss <i>informal</i> cleanups  

**Data to Collect:  
Focus Groups, Interviews,  
Community Engagement**

# Examples of Data Collection

Research Question	Existing Sources of Data	Will it meet our needs?
Did gun violence change in intervention blocks relative to control blocks?	<ul style="list-style-type: none"><li>• Police department data: Shootings</li><li>• Police department data: Weapons Assaults</li></ul>	Yes: <ul style="list-style-type: none"><li>• High geographic specificity</li><li>• Detailed information</li><li>• Validated by hospital data</li></ul> 

No need to collect additional data

## PRE-INTERVENTION

- Literature review
- Opinion surveys
- **Focus groups with community members**
- Budgets and plans from previous cleaning interventions
- Power analysis (how many blocks we must study)

## INPUTS

- Staff to clean streets
- Cleanup supplies and equipment  
*etc.*

- Itemized lists of purchased items
- Internal documents related to hiring and training

## ACTIVITIES

- Pick up trash
- Trim weeds
- Provide sturdy garbage bins  
*etc.*

- Cleanup Schedules
- **Interviews with staff members**

## OUTPUTS

Clean streets

- **Interviews with staff members**

## OUTCOMES

- Reduced gun violence
- Improved quality of life
- Increased community efficacy  
*etc.*

- Police data on shootings and weapons assaults
- 311 Reports (administrative data of citizen complaints)
- **Interviews with community members**

## FULL STUDY →

- Local media
- **Community visits**
- **Observational data (litter and sidewalks)**

# What Did This Accomplish?

Having gone through this process, we have now:

- Ensured that we are measuring what is *actually* happening as opposed to what we *think* we are doing
- Defined *indicators* to monitor our progress
- Identified all of the data sources that we will likely need, so we don't discover later that we missed something
- Prioritized our resources to collect only the data that is necessary
- Ensured that we are collecting the *right* data to answer our research questions
- Included data sources that will give us insight into *how* and *why* the intervention does or does not work

# Citywide Level: Baltimore

Ideally, cities should have a **citywide theory of change** for gun violence reduction, with **each relevant program and policy** having its own theory of change

In Baltimore, all of the following interventions are planned or underway:

- Group Violence Reduction Strategy (GVRs)/Focused Deterrence
- Community Violence Intervention (CVI) programs
- Hold gun traffickers and straw purchasers accountable
- Expand victim services to gunshot survivors
- Violence Intervention and Prevention Programs for Youth
- And more...

*Source: Baltimore City Comprehensive Violence Reduction Plan*

# Takeaways

- Grounding data collection and use in **strategic tools** (such as a Theory of Change) improves the changes that your intervention or policy will succeed
- Even if your intervention or policy “fails,” you will understand *why* and may have clear next steps to take
- Data can come in many forms. The knowledge held by *people* is often overlooked
- Interventions themselves can be an excellent source of data, especially when administrative data is lacking
- Whenever possible, share your data in an online repository
